Composite Steel Drum

Like a coconut, this composite drum has a double shell. The inner is a blow moulded plastic container made from high molecular high-density polyethylene (HM-HDPE) to suit the customer's requirements and this is surrounded by a strong outer shell of steel providing unrivalled protection. The plastic lining is perfect for liquids that are incompatible with steel and is being used for packaging hazardous chemicals and corrosive liquids.

The composite drum is sealed using 50mm buttress threaded plastic plugs, which are tightened onto pre-threaded plastic necks of the drums. For additional security, cap-seals may be fitted.

Features & Benefits:

- The drums come with 3.5/5.5 blue, white and black liners
- Plastic liner is available in different mil thicknesses.

Applications

- Superior chemical resistance.
- Excellent stackability.
- Easy to decorate.
- Weighs less than a heavy gauge steel drum.
